**Ink**

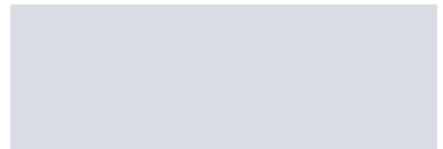

#0E1116

**White**

#FFFFFF

**Soft background**

#F3F5F7

**Divider**

#D7DDE3

Geist

Headings, body copy, navigation and controls.

MARTIAN MONO

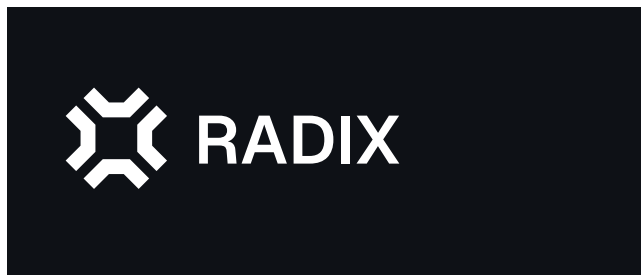

Eyebrows, technical labels and short identifiers.

Website reference: headings generally use weight 500; controls use 600. Eyebrows use 11px / 16.5px, uppercase and 0.09em tracking. Use mono sparingly.

Supporting values: panel #FAFBFB; green tint #F0F7F4; muted text #626B75. Some existing sections retain #606863 body text and #D9DFDC borders. The starter standardizes new dashboard surfaces on the cooler V3 tokens.

02 / LOGO & CONTROLS

Recognizable. Consistent.

Use green on white and white on ink. The original symbol geometry is preserved. The website wordmark is live Geist text; the included outlined SVG lockups reconstruct that treatment for portable use.

Recommended usage: keep at least half a symbol-width of clear space around the full logo. Use the symbol alone where space is limited; start at 24px for product navigation and 30px for the full lockup. Test small exports at actual size.

Do not stretch, rotate, add shadows or recolor the mark. Avoid tan fills, gradients and decorative accent colors. The source contains an older blue SVG used as a CSS mask; it is intentionally excluded from this package.

Primary action

Secondary action

Primary: green fill with ink text. Secondary: white fill, green outline and dark green text. Keep secondary fills white on hover, focus and press. Show keyboard focus with a clear outline.

The website uses animated split-plus buttons. For the dashboard, the starter proposes simpler rectangular controls while retaining this color hierarchy. It does not replace the website component.

03 / DASHBOARD STARTER

Clarity before decoration.

The following are proposed product defaults, not existing dashboard specifications. Keep the website identity while increasing information density.

Typography

32px page title; 20px section title; 14-16px body and controls.

Spacing

4, 8, 12, 16, 24 and 32px. Start with 24px panel padding.

Controls

44px minimum height; square corners; visible field labels.

Data tables

Left-align text; right-align amounts; use tabular numerals.

Status

Approved: green. Pending: neutral. Denied: muted red + text.

Motion

No moving backgrounds. Keep feedback brief and respect reduced motion.

Status additions in the starter: denied #8F3434 on #FBF1F1. Input outline #7A8580 is intentionally stronger than decorative dividers. These are new recommendations, supplied as editable tokens.

Start with [implementation/specimen.html](#). Its synthetic payment examples demonstrate styling only. Integrate radix.css in the dashboard, then review focus, touch targets and actual screens with Xavier.
